

二、英文作文 【請用黑色墨水的筆作答】

Born in this credentialism-oriented society, juveniles are burdened with extreme stress from schoolwork, and I am no exception. In addition, students are also confronted with complexing interpersonal relationships, which may become a disturbance or challenge for us. However, with the rise of advanced technology and the emergence of versatile robots, I am capable of resolving some problems in daily lives by virtue of the technology. Given the opportunity of choosing from among the three problems which the robotic assistant can help me to solve it, I would definitely lay my hand on caring what others think. As for the reasons for such a determination of mine, I can put it into the following aspects. First and foremost, I am an easygoing person so that everytime when I need to make decision, I am prone to adopt others' opinion first without following my mind. I am worried that if I refuse the proposals given by others, it is probable that I am alienated by my friends or classmates. With this in mind, I have cravings for making decisions by my own, and stay informed of what others think. By doing so, I can not only abide by my opinion but maintain a good relationship between my friends simultaneously.

As for what capability the robotic assistant need to possess, the indispensable one is the superb skills of communication. Good communication can achieve the aim of solving problems along with show respect to the people you are talking to. Thus, the problem can be solved without any indignation and wrath from both parties. The ^{excellent} skills of communication serve as the lubricant in the interaction with others, ^{and} that's why I value it and deem it to be the most imperative trait the robot have to be equipped with. In this way, the robot can help me keep intimate bonds with my beloved one. All things considered, versatile as ^{the} robot is, human beings should never be indulged in its convenience. Otherwise, the world probably becomes a place without humanity and benevolence ^{in the near future}. Only when we make good use of the advanced technology and strike a balance between the technology and humanity can we lead a more delightful life, so do the offsprings for generations to come.
